TECHNICAL SKILLS

LANGUAGES: Ruby, Java, Python, Javascript, Swift, SQL, Bash Scripting, HTML5, Sass, React

TOOLS/LIBRARIES: Rails, React, JQuery, NodeJS, GatsbyJS, NextJS, JUnit, Rspec, GraphQL, MongoDB Bootstrap, TailwindCSS, MySQL, Git, Splunk, AWS EC2, DynamoDB, S3, Docker, Flask, Django

CERTIFICATIONS: Splunk Certified Cloud Administrator, Splunk Certified Power User, Splunk Certified Core User, TripleByte Generalist Engineer

EXPERIENCE

Swoop (MyHealthTeam) - San Francisco, CA

Senior Software Engineer September 2025 – Present

Software Engineer August 2021 – August 2025

- Key contributor in a tightly integrated, agile team of engineers, working across frontend, backend, and mobile platforms. Utilized a unified codebase to meet the varied needs of over 60 health websites and an in-house CMS, enhancing cross-functional productivity.
- Developed and maintained a legacy system using Ruby on Rails, jQuery, MongoDB, Elasticsearch, and Redis, with a focus on strong TDD and OOP practices to ensure scalable and maintainable solutions.
- Played a crucial role in a major front-end rebranding project, applying strong CSS expertise.
- Quickly mastered Angular on the job, expediting project timelines and enhancing the frontend user experience with minimal ramp-up time.

Splunk - San Francisco, CA

Badging & Access Specialist

September 2019 – August 2021

- Verified and validated access requests to Splunk's global offices, collaborating with multi-disciplinary teams to ensure seamless synchronization and communication through Slack and integrated email.
- Managed time-based access levels for employee and vendor badges according to company guidelines, coordinating with staff across different time zones.
- Trained and led a team of six on company procedures, JIRA and ServiceNow protocols, and employee interface processes related to building access security.

Marqeta Inc - Oakland CA

Data Analyst Intern

May 2018 – Aug 2018

- Assisted in managing log files with incorrectly flagged transactions due to interface issues between legacy financial systems and Marqeta's record pipeline.
- Doubled the team's efficiency by designing a workflow that streamlined manual processing through the use of Google Apps Script and API posts via curl.

PROJECTS

Learning Links

Technology Stack: React, AWS Api Gateway, Cognito, DyanmoDB

- Developed a web application that allows users to add links to web resources so they can track and study online resources.

Image Storage and Object Recognition Web App

Technology Stack: ReactJS, S3, Incognito, Lambda, Python Keras YoloV3

- Developed a web app that allows users to authenticate and upload images. Images are stored in an S3 bucket. Selected images are processed through a pretrained ML model for basic image detection. Detected objects are shown with confidence levels.

Community Center Website - [Link](#)

Technology Stack: GatsbyJS, GraphQL client, ReactJS, TailwindCSS, Github file storage, NetlifyCMS

- Volunteered to make a multilingual JAMstack site for a local community center. Uploaded yaml files become webpages dynamically through templating. Netlify hosting enabled CI workflow linked with Github master branch. Content management achieved with NetlifyCMS

EDUCATION

SAN JOSE STATE UNIVERSITY – SAN JOSE, CA

Bachelor of Science, Software Engineering

May 2020
